

SEAN DOYLE – Software Engineer / Full Stack Developer

240-997-8067 • sdoyledev@gmail.com • <https://github.com/sdoylelambda> • <https://sdoyledev.netlify.app>

SUMMARY

Experienced in Python, full-stack development, automation, API integration, AI/LLM applications, focused on scalable software solutions that improve reliability and reduce manual effort.

SKILLS

Python • JavaScript/TypeScript • React • Node.js • Flutter/Dart • iOS/Swift • Testing • QA • REST APIs • API Integration • Docker/Kubernetes • GCP • SQL • PostgreSQL • PHP • Selenium • Playwright • AI/ML • LLM Integration • RabbitMQ • Message Queues • CI/CD • Postman • Automation • EHR • Agile

EXPERIENCE

Website Made Easy — Founder / Software Engineer (1.2023–Present) <https://website-made-easy.com/>

Architect full-stack systems, APIs, and automation workflows for SMB clients. Build scalable data pipelines and third-party integrations to process, validate, and transform business-critical data. Develop responsive applications using Python, React, JavaScript, PHP, and SQL while managing the full SDLC, including cloud deployment, CI/CD, monitoring, maintenance, and production support.

Mend — Software Engineer | Automation & Integration Team — EHR (12.2020–11.2022)

Developed Python automation pipelines saving \$60K+ annually and improving message queue reliability and throughput. Built data validation, enrichment, and transformation workflows across third-party EHR systems, ensuring data integrity and HIPAA compliance. Integrated EHR APIs, monitored production systems, automated manual processes, and translated client requirements into tested, reliable solutions.

BloomTech — Team Lead / Full Stack Developer (2019-2020)

Led team of 8 full-stack developers and engineers delivering production applications. Conducted code reviews and enforced full-stack development and engineering best-practice standards.

PROJECTS

A.T.L.A.S. AI Assistant— <https://github.com/sdoylelambda/A.T.L.A.S.>

Android Client — <https://github.com/sdoylelambda/A.T.L.A.S.-mobile>

Live site – <https://sdoylelambda.github.io/atlas-website/>

Built with – Ollama, Whisper, Piper, Playwright, Google/Claude/Gemini APIs, Keyring, Python, Flutter, Modular AI assistant with LLM orchestration, tool execution, and integration with external apps. Built async command processing, extensible feature system, and automation workflows.

AI Frequency Analyzer — <https://github.com/sdoylelambda/ai-frequency-analyzer>

Live site – <https://real-time-audio-analyzer.netlify.app/>

Built with – Python, NumPy, PyAudio, Tkinter, Matplotlib, Flask, Ollama, Groq API, React
Real-time FFT-based audio analysis with frequency detection, filtering, visualization, featuring built-in local AI analysis, review, recommendations, and decision support.

CSV Validation & Enrichment Pipeline — https://github.com/sdoylelambda/process_data_script

Built with – Python – Automated data validation, cleaning, enrichment, and transformation system to improve consistency, data quality, and operational efficiency while reducing manual processing.

EDUCATION

Harvard (edX) — CS • Lambda School / BloomTech — Full-Stack Development & CS
